Essential winter equipment for the racing industry

Successful racing depends upon your horses being kept in tip-top condition. So when the ice and snow appear, you need to be sure they are able to safely travel around paved areas such as in the yard and on roadways. Reducing the risk of horses slipping is of paramount importance and this can be achieved by simply spreading road salt. But keeping on top of that job by hand can be a huge drain on manpower and resources. By investing in a Logic salt spreader, you can keep the yard safe from slipping hazards in the quickest, most efficient way.

Steve Gollings

Steve Gollings has up to thirty horses in training at his yard in Lincolnshire and has been using his Logic GDS salt spreader for over ten years:

“My gallops are about three quarters of a mile from the yard, along country lanes” says Steve, “without the GDS I wouldn’t be able to safely get the horses there when conditions are slippery. It’s so simple just to hook the GDS up to either the 4x4 or even the ATV and the job is done in ten minutes, then we can get on with the business in hand.”

The GDS (Ground Drive) or PDS (Powered Drive) models spread road salt - even when wet!

Logic salt spreaders are designed and manufactured in the UK specifically for the conditions we experience here. Full-scale manufacture of our GDS spreader began in 2001 and are in use in the transport industry, hospitals, shopping centres and sporting venues all around the country so we know that they stand the testing conditions and the test of time. These spreaders employ the same moving-floor technology found in full highway-sized machines but their smaller size allows use in public areas such as racecourses, studs and racing yards.

GDS - Ground Drive

Standard Features

- Tows with any suitable vehicle
- Handles any salt type-even when wet!
- Unique agitation system keeps salt moving
- User-selectable spread width
- 600kg hopper capacity (approx)
- Asymmetric spread pattern capability
- Stainless steel or two-pack painted versions.

PDS - Engine Drive

Standard Features

As for GDS, plus:

- Remote in-cab control
- Hopper capacity up to 750kg available
- De-mount version turns pick-up, trailer etc. into a salt spreading asset
- Trailed version has brakes/suspension for normal road-speed towing between sites.
